

## Required readings and mind map Quality of data in citizen social science

1. Before the workshop, please, read the required readings included in the file “HL\_U5A5 Readings Balazs etal 2021”:  
Balázs, B., Mooney, P., Nováková, E., Bastin, L., Jokar Arsanjani, J. (2021). Data Quality in Citizen Science. In: The Science of Citizen Science. Springer [https://doi.org/10.1007/978-3-030-58278-4\\_8](https://doi.org/10.1007/978-3-030-58278-4_8).
2. After reading the required readings, develop a mind map on the quality of data in citizen social science. A mind map is a scheme with a keyword or phrase in the middle and lines connecting from the middle to main ideas and further to more detailed ideas. Mind maps can have several levels (central idea, main ideas, details etc.). To create a mind map on data quality in citizen science you should:
  - ✓ Find main ideas in the text and write them around the mind map topic
  - ✓ Add next level details such as ideas, topics, or questions for each main idea
  - ✓ You can create the mind map by hand or by using a computer, it is up to you
3. We will use mind maps for the classroom discussion.
